

The SK Property

The SK property is a copper porphyry project at the intersection of the well-known Battle Mountain – Eureka (Cortez) trend and Warm Springs Lineament. It is comprised of 316 unpatented lode claims with a total area of 2,560 hectares.

Exploration Model:

Allied Copper will be exploring in the southern extents of the Battle Mountain – Eureka trends where they intersect the Warm Springs Lineament.

- Porphyry mineralization
- Epithermal Ag-Au veins
- Sub-epithermal Ag-Au veins
- Structurally controlled, sediment-hosted replacement zones
- Skarn-style mineralization

PROJECT HISTORY

The Silver King mine was discovered in the 1870's, with shipments of high-grade lead-zinc-silver reportedly sent to Salt Lake City prior to the onset of WWII. In 1919, construction of a 50 ton per day smelter was started on the property, but never completed. There is no record of additional work until modern exploration on the property was first conducted by B&B Mining in the early 1960's. Subsequent exploration work was carried out by Anaconda Copper Co., Caldera Resources, Great Basin Exploration and, most recently, **Nevoro Nevada Inc. in 2007**

GEOLOGY & MINERALIZATION

Mineralization characterized by disseminated sulfides, quartz veinlet stockwork zones with pyrite and chalcopyrite, retrograde-altered skarn zones in both sedimentary and igneous rocks, replacement zones in limestones and dolomites, and siliceous veins.

Anaconda's historic drilling intersected thick zones of base and precious metal mineralization with numerous, thinner, higher-grade zones.

POTASSICALLY ALTERED
GRANODIORITE ABUNDANT
SECONDARY BIOTITE

HORNFELS WITH QUARTZ-CALCITE
VEINLETS

Nevada is the top ranked mining jurisdiction for investment in the world as stated by the Fraser Institute¹
